### DESCRIPTION

Combining the groundbreaking concept of Frozen Fresh Hops and the innovative technology of Cryo Hops®, we are pleased to introduce a new way to brew fresh hop beers with a convenient, easy-to-use, concentrated pelletized product. Cryo Fresh, an advancement of trial products YCH 301 and YCH 302, is derived from the concentrated lupulin of fresh whole-cone hops. This unique product captures the vibrant flavors and aromas of fresh hops, with a fraction of the footprint and the mess that comes with fresh whole cones. Cryo Fresh offers brewers the opportunity to replicate harvest-fresh aromatics year-round.

Cryo Fresh starts in the field with freshly harvested, un-kilned whole cone hops. These are immediately frozen, locking in their delicate aromas and preserving the integrity of the lupulin glands with a refined freezing process. From there, the whole fresh frozen cones undergo our patented cryogenic processing. This isolates the concentrated lupulin while preserving essential hop oils in a frozen, nitrogen-rich, low-oxygen environment, resulting in Cryo Fresh pellets.

### PACKAGING & STORAGE

Cryo Fresh must remain frozen for the duration of shipping.

For optimal quality, store Cryo Fresh between 0 and 14°F (-18°C to -10°C) for up to 3 years. If the product is stored between 14 and 35°F (-10°C to 2°C), we recommend using it within 48 hours.

### APPLICATION AND USAGE

Cryo Fresh can be used at any stage, including the cold side, where traditional whole cone fresh hops are simply impractical. However, to maximize the fresh hop attributes, YCH suggests using Cryo Fresh in the active or post-fermentation dry hop.
