DESCRIPTION

YCH 801 Trial is the essential oil fraction derived from supercritical CO₂ hop extract. YCH 801 is virtually free of alpha acids and beta acids and will not provide any bitterness or contribute to a sun struck flavor. The key essential oil compounds found in Hop Oil are β -pinene, myrcene, humulene, caryophyllene and linalool.

PACKAGING & STORAGE

Standard packaging is available in 1 kg and 5 kg aluminum bottles. YCH 801 should be stored at a temperature between 32°F and 42°F (0°C and 5°C). Under these conditions, YCH 801 will remain stable in closed containers for two (2) years.

APPLICATION & USAGE

YCH 801 is generally dosed post-fermentation to provide hoppy aroma/character, and can be used in conjunction with dry hopping, or in full replacement. YCH 801 is generally dosed at levels 5 - 40ml per hectoliter, but normally not to exceed 10ml. YCH 801 may be added without prior dilution to beer after fermentation preferably by metered injection into the beer stream during transfer. The dosing rate for a brewery would completely depend on brew house, beer style and intensity/flavor preferred. YCH 801 dosage amounts can easily be tested in bottles of beer by dosing 5-20 μ l of YCH 801 in a 355ml room temperature bottle of beer and mix by inversion then chilled for two hours under refrigeration. Dilution of YCH 801 at 1ml of oil into 100ml of ethanol and/or propylene glycol can produce a beer soluble matrix, but probably is unnecessary. YCH 801 appears to have enough solubility in beer at these low dosage rates to produce the hoppy character required.

AROMA

Perception of hoppy character and various related notes in beer will depend on the quantity of product added and when the product is added.
